

Transfer Reports SFTP

V1.0.2

Description-

The module allows you to transfer a report securely as a csv file using SFTP. The module has an hourly cron that will check preferences and triggering your upload. To limit resources used, it can only upload a report once per day. You can also trigger the module with a button or a data entry trigger.

The module uses **phpseclib**, one of the best ways to implement SFTP in PHP. According to AI and SFTP Cloud, here are some of the reasons why:

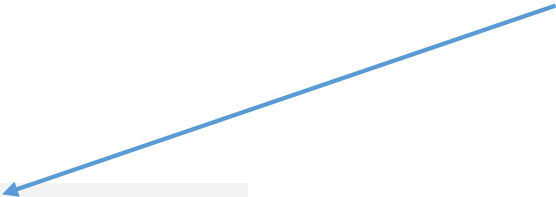

1. **Comprehensive Security:** phpseclib is a pure PHP implementation, supporting a wide range of cryptographic algorithms, ensuring secure file transfers[\[1\]](#).
2. **Wide Compatibility:** It works with various PHP versions, including older ones, and doesn't require external dependencies[\[1\]](#).
3. **Ease of Use:** The library offers a straightforward API, making it easy to perform complex tasks with minimal code[\[1\]](#).
4. **Advanced Features:** It includes features like directory sorting, resuming transfers, and more[\[1\]](#).
5. **Active Development:** phpseclib is actively maintained and regularly updated[\[1\]](#).

Disable Hourly Cron for this project:	☐
Time of Day to Run Cron in 24-hour format, e.g., 14 for 2 PM: * must provide value	4
Second Time of Day to Run Cron in 24-hour format, e.g., 18 for 6 PM:	9
Run on Monday:	☒
Run on Tuesday:	☐
Run on Wednesday:	☒
Run on Thursday:	☐
Run on Friday:	☒
Run on Saturday:	☐
Run on Sunday:	☐

Token for current project:	
* must provide value	
1. Report Settings: +	
1. Report ID:	68
* must provide value	
Site:	us-east-1.sftpccloud.io
* must provide value	
Port:	22
* must provide value	
Username:	
* must provide value	
Password:	
* must provide value	
CSV File Name:	sandteststftp
* must provide value	
Filename Format:	filename_plus_datetime

Super users and project builders can transfer the report by clicking the following button under External Modules. To give all users the ability to transfer data you will need to create a bookmark.
